NEXUS TECH SUMMIT 2027

Sustainable Tech Guide

GreenCircuit demonstration guide - questions for a more considered technology discussion.

Consider the whole use case

Ask what equipment, services and information are needed. Consider whether the proposed change solves a useful problem and how existing resources can be used appropriately.

Ask for evidence

Request clear evidence for environmental or efficiency claims. Distinguish measured information from assumptions, marketing language and illustrative examples.

Plan responsible disposal

Use organiser-verified instructions for packaging and venue waste streams. Do not assume that every material can be processed in every location.

At the Nexus demo

The written event concept refers to 500 ml recyclable rPET water bottles. Disposal information and event initiatives require organiser verification before use at a real event.

Review checklist

Is the claim specific?
Who supplied the evidence?
Does it apply to this event and location?
Are the disposal instructions verified?

GreenCircuit is an illustrative partner. No quantified environmental benefit or certification is claimed.
